Protection of digital health information: Examining guidance from the physician regulatory colleges in Canada

Neil G Barr 1, Glen E Randall 1

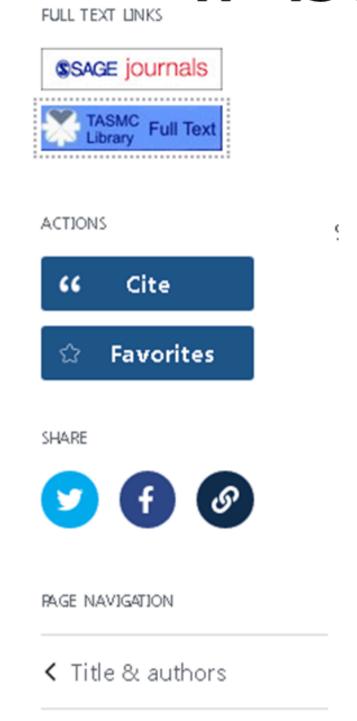

Affiliations + expand

PMID: 31510807 DOI: 10.1177/1833358319873968

Abstract

Background: The use of information and communication technology (ICT) has tremendous potential to enhance communication among physicians, leading to improvements in service delivery. However, the protection of health information in digital/electronic format is an ongoing concern.

Objective: The purpose of this study was to examine guidance for the protection of health information when using ICT from all 10 of Canada's provincial regulatory colleges for physicians and to discuss the potential policy and service delivery implications.
